

Daniel Agostinho

danielcagostinho@gmail.com | danielagostinho.com | github.com/danielagostinho

Frontend (Full Stack) Engineer specializing in React.js, Next.js, and Web3 technologies. Focused on building delightful interactions and robust component libraries.

Experience

Wayfinder AI | Senior Software Engineer | Jan 2024 — Present

- Led UI development of ChatGPT-like interface for AI agents that handle smart contract deployment, Hyperliquid trading, Polymarket trading, and automated trading strategies.
- Implemented real-time chat using custom LLMs and WebSocket for agent interactions.
- Defined frontend architecture including state management patterns, component organization, API design, and routing structure adopted across the engineering team.
- Mentored junior developers through code reviews and pair programming on best practices and problem-solving approaches.

Parallel Studios | Senior Software Engineer | Apr 2022 — Dec 2024

- Built NFT pack drop platform with purchase and redemption features, handling smart contract interactions for users to redeem pack NFTs.
- Integrated Web3 wallet connections (ethers.js, wagmi, RainbowKit, WalletConnect) for blockchain transactions.
- Built e-commerce store with Stripe payment integration handling checkout and payment processing.
- Developed Spotify Wrapped-style analytics feature showing users their NFT collection stats, trading activity, and financial metrics.

GEOTAB | Software Developer | Apr 2021 — Jan 2022

- Built internal admin platform features in Angular including transaction processing, ordering workflows, and shipping management for thousands of employees.
- Created component schematic CLI tool that reduced setup time for new components.
- Optimized SQL queries, cutting execution time from minutes to seconds.
- Mentored new developers and ran technical discussions on architecture and coding practices.

Intact Financial Corporation | Test Automation Developer | Oct 2019 — Mar 2021

- Built automated test framework and suites for large-scale insurance application.
- Developed React.js dashboard showing performance and regression test results.
- Owned execution and maintenance of regression suite for legacy application.

McMaster University Technology Services | Data Warehouse Developer / Analyst | May 2017 — May 2018

- Built data extraction and transformation processes for university application.
- Developed web tools used by 30,000+ students for course planning and registration.

Education

McMaster University, Bachelor of Engineering (Co-op) | Software 2014 — 2019

Technical Skills

Frontend: TypeScript, React.js, Next.js, Angular, React Native, Tailwind CSS, Radix UI, Framer Motion

Backend: Python (Django), C#, Java, Node.js

Web3: ethers.js, wagmi, RainbowKit, WalletConnect, Smart Contracts

Tools: Git, Docker, WebSocket, Jest, Cypress, Selenium, PostgreSQL
